Professional Summary

An MCA postgraduate with expertise in Artificial Intelligence and Software Development, with practical experience in Java, Python, and SQL. Adept at using Agile methodologies to deliver efficient, scalable, and creative software solutions. Has a solid background in object-oriented design, algorithm design, data structures, and complexity analysis.

Education

SRM Institute of Science and Technology	Kattankulathur, Chennai
MCA-Generative AI (CGPA:9.5)	July 2024-May 2026
Sri Ramakrishna Mission Vidyalaya College of Arts and Science	P.N Palayam, Coimbatore
Bachelor of Science Computer Science (CGPA:7.49)	June 2021-May 2024

Projects

SSM Interiors

- Designed and developed an interactive web application for interior/exterior design using HTML, CSS, JavaScript, and Bootstrap, improving navigation efficiency for 50+ design templates.
- Implemented a MySQL database to manage backend storage, enabling smooth handling of hundreds of customer records.

Study Buddy

- Developed a full-stack study companion with secure JWT authentication, study session tracking, quiz and coding modules, and AI-powered communication feedback.
- Implemented real-time analytics and progress tracking, providing detailed insights into study habits and learning outcomes.
- Designed a responsive, interactive frontend using Tailwind CSS and modular JavaScript, integrated with audio recording and backend FastAPI services.

Technical Skills

Programming languages: Java, Python, SQL

Data Analysis & Visualization: Excel, Power BI

Web Development: HTML, CSS, JavaScript

AI, ML: Deep Learning, Natural Language Processing

Tools & Platforms: MySQL, Git/GitHub, Google Colab

Internships

Machine Learning Intern - Cognifyz Technologies

- Built a content-based recommendation system that improved restaurant rating prediction accuracy by 15%, using user preference data and similarity scoring. Analyzed geospatial data from more than 50 locations.

Data Science and Analytics Intern - Future Interns

- Created a interactive dashboards using Power BI and Google Looker Studio to visualize e- commerce sales data, resulting in a 15% improvement in identifying key sales trends. Applied data cleaning, visualization, and NLP techniques in Python.

Certifications and Achievements

- Power BI Workshop:** Engineered AI-enhanced Power BI dashboards to visualize 1,000+ sales transactions, enabling quicker identification of top-performing products and increasing the lead conversion rate by 8%.
- IoT Workshop:** Gained experience with sensor integration, microcontroller programming, and device connectivity.
